

Correio Address Validation™

Real-Time, Cost-Effective, Integrated Address Verification

If you think address validation software is unnecessary because your statement vendor cleanses the addresses before statements are mailed, think again. Your credit union likely sends plenty of mail that doesn't go through your statement vendor.

Correio uses the United States Postal Service (USPS) address database to ensure that all of your member address records remain standardized and cleansed. With multiple integration points throughout the Episys® platform, Correio can run in batch mode against your entire database as part of your periodic maintenance procedures, or it can be invoked on demand for situations such as new member enrollment. It can also be invoked from a web browser for individual shipping or similar purposes.

The product accesses both the standard USPS database and the USPS Delivery Point Validation (DPV) database, ensuring maximum accuracy.

Benefits

- Licensed software with no per-verification fee
- The highest level of address data quality possible
- Fraud prevention/Red Flag support
- Significantly reduced returned mail
- Increased operator efficiency and capacity
- ZIP + 4 for maximum postage discounts on all mail
- Improved member service and perception
