

Prova ID Verification™

Easy, Effective Member Identification

Prova offers your credit union's tellers an easy method to capture a member's identification (driver's license, state ID card, etc.) and store it in the system for later retrieval.

The process is simple. If an ID is present in the Prova system when a teller accesses an account, the scanned ID is immediately displayed, providing instant identification of the person in the teller line.

Likewise, if there is no scanned ID stored in the Prova system, the software prompts the teller to scan the member's identification and then guide the teller through the scanning process.

Benefits

- Instant member recognition at the teller line
- Easy signature verification
- Reduced fraud
- Increased security
- More efficient service
- Minimal time needed to capture the ID
