

CORREIO ADDRESS VERIFICATION SYSTEM

Powered by CUTEK

Benefits

- Licensed software within per-verification fee
- Fraud prevention/Red Flag support
- Significantly reduces returned mail
- ZIP + 4 for maximum postage discounts on all mail
- Improved member service and accuracy

Key Features

- Fix input errors at point of contact
- Improve marketing efficiency
- On-demand and batch updates of existing addresses
- Integrates with third-party applications, including Envoy

CUTEK's **Correio Address Validation** solution uses the United States Postal Service Address Management System (USPS AMS) database to ensure your member address records are standardized, corrected, and have the correct ZIP Codes. With multiple integration points throughout the Episys platform, Correio can run on-demand for new member enrollment or in batch mode against your entire database as part of your periodic maintenance procedures.

We invite you to contact us for a demo.

CUTEK's Correio has been the perfect method for getting the member's address into the database correctly the first time.
