Speedy and centralized processing

Simple, intuitive interface

Key Features

Integration with Symitar®

Centralized or On-Demand Check Printing

Levy Capture

Levy Maintenance

Smart account search and detection of protected funds

Add/Remove/Modify Process Servers

Save time by utilizing a streamlined, centralized HTML levy processing interface. Consider CUTEK's Levy Module solution. Managing government levies and garnishments has typically been a time, labor and paper-intensive task. Depending on volume, this cumbersome process can be a considerable distraction for employees who could otherwise be serving your members.

The CUTEK Levy Module virtually automates the entire process once basic information is entered into the web style form. The module keyed by social security number. looks for available funds across account numbers, looks for protected funds, and automatically places holds. Checks can be cut immediately on a case-by-case basis or they can be produced in batch.
