

Wire Management Module

A Seamless, Robust Solution for Wire Transfers

CUTEK's Wire Management Module is the ideal solution even the smallest credit unions, up to and including high-volume environments that deal with complex, international wire transfers on a routine basis. Fully integrated with the Symitar® Episys® platform, the Wire Management Module makes short work of wire transfers, forwarding the transfer data from the teller to the appropriate manager and then on to the accounting department. All transactions are handled automatically with full transaction receipts.

The software also performs all OFAC (Office of Foreign Assets Control) checks, eliminating the need for a separate step.

Features

- Streamlined interface with role-based workflows and queues
- Admin interface for easy configuration
- ABA validation against the FedWire and ACH directories
- Integrated OFAC checking
- Supports dual approval for large amounts
- Ability to create a new wire by copying the details from a prior wire
- Full transaction handling, including funds availability holds
- Eliminates faxing between branches and the main office
